ELECTRODE PROPERTIES OF ION-EXCHANGE
MEMBRANES (Elektrodynye Svoystva Ionitovykh
Membran). Dec 60 [26]p. 40 refs. RTS 1719.
Order from LC or SLA m\$2.70, ph\$4.80 61-15278

Trans. of Leningrad U. Vestnik (USSR) 1957 [v. 12]
no. 16. Seriya Fizika i Khimi no. 3, p. 85-102.

It has been shown that the electrode behaviour of membranes made from the sulphonic acid resins SDS, MSF, SDV-3 and KU-2 and the carboxylic acid resins KFU, KRFFU and KMD is determined by the properties of the active groups in the resins. The change of these resins from hydrogen electrode behaviour to sodium electrode behaviour is in accordance with the ion exchange theory of the glass electrode. The electrode behaviour of RP, KN and KMT resins does not conform to ion-exchange theories presumably due to the more complex chemical nature of these resins. The conditions under which the electrodes may be (Chemistry-Physical, TT, v. 5, no. 7) (over)
